

Migration from 4GL code to .Net, J2EE, Flex
SOFTMAINT will present its Legacy Modernization Solutions at CeBIT
2010, on March 2nd to 6th in Hanover, Germany
Hall 3, stand H04

Softmaint, the European leader in Legacy Modernization, will present its software suite and expertise providing organizations with automated IT modernization solutions for migrating from their legacy systems to new systems and WEB standards.

Many companies want to migrate from legacy IT platforms, databases and programming languages. They are looking to reduce the costs associated with their existing legacy systems whilst benefitting from the advantages of newer environments. In many cases, migration is the fastest way to eliminate costly license fees, avoid problems related to scarce 4GL developer resources and provide an agile IT environment.

SOFTMAINT provides the most comprehensive automated Legacy Modernization solutions, from architecture migration to platform migration, language conversion, etc.... **SOFTMAINT** will present two of its solutions at CeBIT:

Automated 4GL Migrations

Its "FAST" solution - Future Architecture System Transformation - is dedicated to the transformation of existing architectures into modern multi-tier, web-enabled Java or .NET architectures. FAST is the most complete solution including over 20 automated tools that convert 4GL code to Java or .NET platforms.

Automated migration toward .Net, Java, Flex is available for organizations with applications developed in the following 4GLs:

- Visual Basic
- Delphi
- COOL:gen
- Oracle Forms
- Power Builder
- Progress
- Uniface

FAST provides significant business benefits beyond simple application language conversion including:

- user interface enhancements,
- code consolidation and optimization,
- application re-engineering,
- optimization of component utilization.

FAST solution is particularly adapted to major companies with voluminous legacy applications that they want to modernize, so as to improve their business, or for security reasons related to

the use of older technologies, or to open up their Information System to partners, customers, or to reduce maintenance costs.

Natural Adabas automated Migration

Organizations are spending an ever growing proportion of their budgets running their Natural applications and ADABAS databases on legacy platforms. Many of them are looking to change or modernize this technology. Today there are alternative environments that can provide the required computing power, agile environments for business updates, an abundance of available developer resources and significantly reduced total cost of ownership (TCO).

The SOFTMAINT automated Modernization expertise enables these organizations to migrate or to open up to web or to Service Oriented Architecture

Partnerships with German IT services companies

At CeBIT, SOFTMAINT is also looking to establish partnerships with IT Services companies who want to acquire this technology to address their own customers.

A seminar on Softmaint's Legacy Modernization solutions

At CeBIT, Softmaint will organize a:

Seminar of presentation
Automated legacy modernization toward WEB 2.0
March 4th, 2010
CeBIT, Hall 3, stand H04

About SOFTMAINT

SOFTMAINT is Europe's leading provider of automated legacy modernization solutions. For over 15 years, SOFTMAINT Legacy modernization expertise and solutions have been dedicated to helping numerous large companies efficiently modernize their IT systems.

Our expertise and automated solutions include:

- Architecture evolution to .Net, Java, Flex: our FAST - Future Architecture System Transformation - solutions
- Platform migration, database and language conversion
- Reverse documentation and technical urbanization

With over 150 projects successfully delivered and longstanding experience, SOFTMAINT provides the most comprehensive modernization approach combining solutions, methodology, industrial delivery and quality engagements through CMMI2.

SOFTMAINT is a wholly owned subsidiary of SODIFRANCE Group, an IT services company with 15 offices in France, Belgium and Tunisia, listed on the EURONEXT Stock Market (code: SOA).
